

Isaque Benevides Costa

Senior Full Stack Developer

Senior Full Stack Engineer · Senior Software Engineer · Backend Engineer · Frontend Developer · Tech Lead · 9+ years

isaquebc@gmail.com · +55 11 98675-6042 · São Paulo, Brazil · Remote · github.com/isaquebc · linkedin.com/in/isaquebc · isaquebc.github.io/curriculum

SUMMARY

Senior Full Stack Developer / Senior Full-Stack Engineer / Senior Software Engineer / Senior Software Developer with 9+ years across startups, Chief Technology Officer (CTO) roles, and enterprise remote work as Software Engineer / Software Developer, Backend Engineer / Backend Developer, Frontend Engineer / Frontend Developer, and Tech Lead. Most recently 5 years on the core software engineering team at CDI GlobalTrack (Oklahoma, USA, remote) on a real-time pipeline-inspection platform — full ownership of React + TypeScript frontend, Django backend, multi-database architecture (PostgreSQL / PostGIS, MongoDB, Redis), Docker, Amazon Web Services (AWS), and Prometheus / Grafana observability.

Currently architecting Artificial Intelligence (AI) multi-agent systems with custom governance protocols (ADR, AIR, mandatory review gates) and orchestrating specialized Claude agents across full-stack projects. Comfortable as Technical Lead / Engineering Lead leading architecture decisions and shipping production end-to-end. Intermediate+ professional English.

WORK EXPERIENCE

Senior Full Stack Developer — CDI GlobalTrack

Mar 2021 – Apr 2026 · Oklahoma, USA · Remote

- Member of the core software engineering team on an enterprise pipeline-inspection platform used daily by operators, supervisors, and clients across the US
- End-to-end ownership of frontend (React 18 + TypeScript) and backend (Django, 31 apps): authentication, ingestion, spatial queries, live streaming, multi-step forms, map-based UIs, and role-aware navigation
- Built real-time Global Positioning System (GPS) tracking and anomaly detection over WebSockets and the RxDjango reactive framework (co-author)
- Designed multi-database architecture (PostgreSQL with PostGIS, MongoDB, Redis, Memcached); maintained Docker orchestration, GitHub Actions Continuous Integration / Continuous Deployment (CI/CD), and Amazon Web Services (AWS) infrastructure (EC2, RDS, S3, ECR, ECS, Lambda, API Gateway, Route 53, CodePipeline)
- Built the observability stack from scratch — Prometheus, Grafana, Loki, Sentry — metrics, log aggregation, alerting, root-cause analysis; led code reviews, mentored juniors, applied SOLID and Test-Driven Development (TDD)

Technologies: Python, Django, React, TypeScript, PostgreSQL, PostGIS, MongoDB, Redis, REST API, GraphQL, WebSockets, Docker, AWS, GitHub Actions, Prometheus, Grafana, Loki, Sentry

Chief Technology Officer (CTO) — ACE1

2019 – 2021 · Brazil

- Led a 3-person engineering team building a Brazilian luxury-goods marketplace competing with GOAT and StockX — blank slate to production in a fast-paced, founder-led environment
- Owned the full technical lifecycle — every architecture decision, schema, Application Programming Interface (API) contract, and trade-off; rapid build → ship → iterate cycles with non-technical founders
- Greenfield Node.js + TypeScript backend on serverless Amazon Web Services (AWS) Lambda + API Gateway with managed PostgreSQL — clean service boundaries, REST API design, 2 years of production traffic at near-zero infrastructure cost
- React Native iOS and Android frontend; multi-sided marketplace logic (buyers, sellers, admin moderation; commission and fee logic; certificate-of-authenticity flow; full order lifecycle with refunds)
- Worked directly with marketing co-founder and team — built landing pages with click tracking and shipped attribution data into the platform

Technologies: Node.js, TypeScript, AWS Lambda, API Gateway, Serverless, PostgreSQL, React Native, iOS, Android, REST API

Tech Lead (started as trainee) — TheVelops

2017 – 2019 · Brazil

- Grew from trainee to Tech Lead at a startup-agency running 4+ simultaneous client products — rapid prototype, ship, iterate
- Led Permuta Fácil — a property-exchange matching platform that became the company's flagship revenue source; shipped Node.js + Express REST backends with PostgreSQL or MongoDB layers and React frontends
- Owned Amazon Web Services (AWS) costs, code reviews, monitoring, and release planning across the portfolio; ran client-facing requirements discussions translating business goals into User Interface (UI), API, and data-model decisions

Technologies: Node.js, Express, REST API, React, MongoDB, PostgreSQL, AWS, Team Leadership

SKILLS

Frontend: React, Next.js, React Native, TypeScript, Redux, GraphQL, Apollo Client, webpack, ECMAScript 2015+ (ES6+), HTML, CSS

Backend: Django, Node.js, Python, Express, FastAPI, REST API design, GraphQL, WebSockets, Socket.io

Databases: PostgreSQL, PostGIS, MySQL, MongoDB, Redis, pgvector

DevOps / Cloud: Docker, Amazon Web Services (AWS) — EC2, S3, Lambda, API Gateway, ECR, ECS, Route 53, CodePipeline; GitHub Actions, Continuous Integration / Continuous Deployment (CI/CD)

Observability: Prometheus, Grafana, Loki, Sentry — metrics, log aggregation, alerting, root-cause analysis

AI / LLM: Claude, Claude Code, multi-agent orchestration, custom agent protocols (ADR / AIR), agent-to-agent delegation, governance and mandatory review gates, Retrieval-Augmented Generation (RAG), LangChain, OpenAI, Google Gemini, HuggingFace embeddings

Practices: SOLID, Test-Driven Development (TDD), clean architecture, Scrum, Kanban, code reviews, mentoring, full-lifecycle ownership, async remote collaboration; background in C, C#, Java EE, Linux, and Entrepreneurship

EDUCATION

MBA — Software Engineering with Artificial Intelligence (AI)

Full Cycle · 2026 – 2027

Associate Degree — Systems Analysis and Development

Centro Universitário Senac · 2014 – 2017

SELECTED PROJECTS

Minha Kaya — Solo Developer, AI Agents Architect

Personal home administration system (bills, tasks, fairness engine). 8-agent Claude Code system with strict governance — ADR / AIR / CEO Agents, Frontend and Backend Engineers, mandatory Reviewer gates (PASS / FAIL). FastAPI microservices + Redis Streams event bus.

Creators Safe Club — Partner / Co-founder, AI Agents Architect

Receivables-advance fintech for Brazilian content creators (deployed, in production). 9-agent Claude orchestration: Backend / Frontend Engineer, Business Specialist, Credit Risk Analyst, QA, Designer, CEO. Django + Next.js + PostgreSQL + Redis.

MBA AI — Ingest & Search — Author

github.com/isaquebc/MBA-AI-ingest-search

Full Cycle MBA challenge. Retrieval-Augmented Generation (RAG) pipeline ingesting PDFs into PostgreSQL + pgvector. Pluggable OpenAI / Google Gemini / HuggingFace embeddings and chat Large Language Model (LLM) providers. Python 3.12 + LangChain + Docker Compose.

CIB Style — Author, npm: @alphorriese/cib-style

Published React + TypeScript component library on npm. Atomic design system with light / dark theming, design tokens, accessibility, and Storybook documentation.
