

SUMMARY

Senior full stack developer with 9+ years of experience across startups, CTO roles, and enterprise remote work. Most recently spent 5 years at a US pipeline-tracking company (CDI GlobalTrack, Oklahoma) as the main developer on a real-time inspection platform — owning the full stack from React + TypeScript frontend to Django backend, multi-database architecture, Docker orchestration, AWS deployment, and Prometheus/Grafana monitoring. Currently applying that same systems thinking to AI: designing multi-agent architectures with custom governance protocols (ADR, AIR, mandatory review gates) and orchestrating specialized Claude agents across full-stack projects. Comfortable leading architecture decisions, shipping production systems end-to-end, and working independently across time zones.

WORK EXPERIENCE

Senior Full Stack Developer

Mar 2021 – Apr 2026

CDI GlobalTrack

Oklahoma, USA · Remote

- End-to-end ownership of frontend (React + TypeScript) and backend (Django, 31 apps) for an enterprise pipeline inspection platform
- Built real-time GPS tracking and anomaly detection using WebSockets and the RxDjango reactive framework
- Designed multi-database architecture: PostgreSQL with PostGIS, MongoDB, Redis, Memcached
- Maintained Docker orchestration, GitHub Actions CI/CD pipelines, and AWS infrastructure (EC2, RDS, S3, ECR)
- Set up and owned monitoring stack: Prometheus, Grafana, Loki, Sentry

DjangoReactTypeScriptPostGISWebSocketsDockerAWSPrometheusGrafana

CTO

2019 – 2021

ACE1

Brazil

- Led full architecture and development of a luxury-goods marketplace competing with GOAT and StockX in Brazil
- Shipped iOS and Android apps with React Native; serverless AWS backend (Lambda + API Gateway)
- Built a certificate-of-authenticity system for collectibles and limited-edition sneakers
- Achieved zero infrastructure cost for 2 years by leveraging AWS serverless at scale

React NativeAWS LambdaAPI GatewayNode.jsServerlessiOSAndroid

Tech Lead (started as trainee)

2017 – 2019

TheVelops

Brazil

- Grew from trainee to tech lead at a startup-agency managing multiple parallel client projects
- Led Permuta Fácil — a property-exchange platform that became the company's flagship revenue source
- Owned AWS costs, PR reviews, monitoring, and technical roadmap across 4+ simultaneous projects
- Built 4 products from scratch; contributed to dozens more across the agency portfolio

ReactNode.jsMongoDBAWSTeam Lead

SKILLS

Frontend	React, Next.js, React Native, TypeScript, Redux, GraphQL, Apollo.js, webpack, ES6
Backend	Django, Node.js, Python, Express, FastAPI, PostgreSQL, MySQL, MongoDB, Redis, Socket.io
DevOps / Cloud	Docker, AWS (EC2, S3, Lambda, API Gateway, ECR/ECS, Route 53, CodePipeline), GitHub Actions, Prometheus, Grafana, Loki, Sentry

AI / Agents	Claude, Multi-agent orchestration, Claude Code agents, Custom agent protocols (ADR / AIR), Agent-to-agent delegation, Governance & mandatory review gates
Background	C, C#, Java EE, Linux, Entrepreneurship

SELECTED PROJECTS

CDI GlobalTrack

[Senior Full Stack Developer](#)

Enterprise real-time pipeline pigging inspection platform. GPS tracking, geospatial analytics (PostGIS), anomaly detection, multi-user collaboration via WebSockets.

Sementes

[Solo Developer](#)

Social impact platform celebrating Black history and community. Next.js + Strapi CMS, QR code management system, and data export.

CIB Style

[Author](#) · [@alphorriese/cib-style](#)

React component library published on npm. Atomic design system with light/dark theming and Storybook documentation.

ACE1

[CTO](#)

Brazilian luxury-goods marketplace (GOAT/StockX model). React Native iOS/Android + authenticity verification system for collectibles.

Permuta Fácil

[Tech Lead](#)

Property-exchange platform. Registers listings and desired swaps, finds matches in the database, and displays them on a Tinder-style map.

SOM

[Volunteer](#) · [som.vc](#)

Platform connecting independent artists with music producers (in partnership with Mídia Ninja), enabling national and international tour opportunities.

Minha Kaya [AI Agents](#)

[Solo Developer](#) · [AI Architect](#)

Personal home administration system (bills, tasks, fairness engine). Designed an 8-agent Claude Code system with strict governance: ADR Agent, AIR Agent, CEO Agent, Frontend/Backend Engineers, and mandatory Frontend/Backend Reviewer gates (PASS/FAIL before any merge). FastAPI microservices + Redis Streams event bus.

Creators Safe Club [AI Agents](#)

[Solo Developer](#) · [AI Architect](#)

Receivables advance fintech for Brazilian content creators. Built with a 9-agent Claude orchestration system: Orchestrator routes requests to Backend Engineer, Frontend Engineer, Business Specialist, Credit Risk Analyst, QA, Designer, and CEO agents. Custom protocol enforces business-validation approval gates before any implementation proceeds. Django + Next.js + PostgreSQL + Redis.
